CAMBRIDGE

(11, 1)

Collaborate on projects using versatile communication and application sharing tools.

start

Roam if you want. Windows XP automatically recognizes the 802.11 wireless network you're near and connects you to it.

Arrange files and folders any way that makes sense to you. Storing, retrieving, and managing work has never been simpler.

Free yourself from your office. Remote Desktop gives you control of your own computer while on the go.

Microsoft Windows XP Professional

For the best experience on Windows XP, look for products that carry the Designed for Windows XP logo.

Please visit the Windows Catalog your place to find products built for Windows. www.microsoft.com/windows/catalog/

start here

welcome to Windows XP

Introducing Windows XP Professional, the most reliable, capable Windows ever. You're about to experience an operating system built for the way you work.

Step 1. The Start Here guide located under this panel provides information about installing and setting up Windows XP Professional.

Step 2. Remove the CD from the center panel, and locate your Product Key on the back panel of this folder.

Step 3. Insert the CD into your computer's CD-ROM drive and follow the instructions on the screen.

explore

Now that you've installed Windows XP Professional, take a peek at our new look and feel. . . .

Router Upgrade Help

You install new versions of the router's software using the Router Upgrade screen.

Click the **Check** button to go to the NETGEAR website to get **new versions** of the router software. After downloading the file, you will need to unzip (or unstuff) it before upgrading the router.

Select the check box if you want to check for a new version upon login.

IMPORTANT! Once you click **Upload**, do *not* interrupt the process of sending the software to the router and restarting the router. If you think the process might be interrupted in some way, click **Cancel** to keep the current router software.

Locate and select the upgrade file on your hard disk.

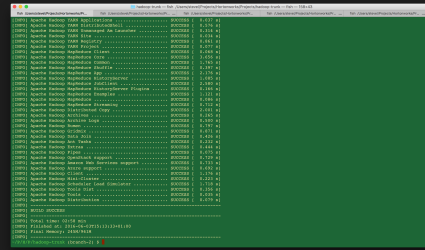

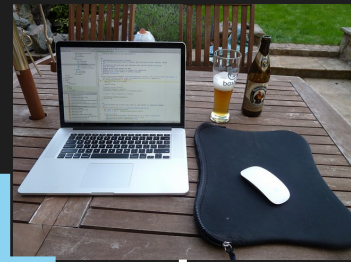

1. Go to www.NETGEAR.com and download the updated software.
2. If it is not done automatically, uncompress the file.
You might want to read the *Release Notes* before continuing.
3. Click **Browse**.
4. Locate and select the file you just

Oh no — pwned!

Pwned on 1 [breached site](#) and found no [pastes](#) ([subscribe](#) to search sensitive breaches)

[✉ Notify me when I get pwned](#)

[₿ Donate](#)

Breaches you were pwned in

A "breach" is an incident where a site's data has been illegally accessed by hackers and then released publicly. Review the types of data that were compromised (email addresses, passwords, credit cards etc.) and take appropriate action, such as changing passwords.

LinkedIn: In May 2016, [LinkedIn](#) had 164 million email addresses and passwords exposed.

Originally hacked in 2012, the data remained out of sight until being offered for sale on a dark market site 4 years later. The passwords in the breach were stored as SHA1 hashes without salt, the vast majority of which were quickly cracked in the days following the release of the data.

Compromised data: Email addresses, Passwords
